

It was being promoted by Google that it's "enemy" of ChatGPT. But it does absolutely bad:

- Search and give fake evidences about anything
- Laugh when user yells
- Stupid at programming
- Not listen
- Arbitrary inference
- Summary anything too general
- Disregarding and belittling users
- It explains as if the user doesn't know or needs explanation
- Responses are usually too defensive
- General apology but not retract the wrongdoings

Gemini is giving user more fake evidences than ChatGPT and DeepSeek. For example, after searched for an animator, Gemini gives user that animator is using Minecraft to make film; while actually animator is drawing and animating all from scratch. Gemini apologizes only if user criticizes that it gives fake evidences about an animator
